

You both ran across the tracks. You didn't hear anything coming. Only one of you made it. Game over.

Please don't play with your life. The world needs all of us. Learn the Light Rail safety rules:

1. Light Rail trains are fast, frequent and very quiet. And trains can come from any direction at any time.
2. Trains can't swerve to avoid hitting you and can take as much as the length of two football fields to stop.
3. Trains can run day and night and can come one right after the other.

Learn more about how to be safe around light rail tracks and trains. Teach your family how to be safe, too.
